in partial fulfillment for the award of the degree of

BACHELOR OF ENGINEERING

in

COMPUTER SCIENCE AND DESIGN

RAJALAKSHMI ENGINEERING COLLEGE

ANNA UNIVERSITY CHENNAI

SEPTEMBER 2026

Bonafide Certificate

RAJALAKSHMI ENGINEERING COLLEGE

ANNA UNIVERSITY CHENNAI

Certified that this project report titled “THE CHAOS” is the bonafide work of PAWAN KUMAR S (231701038), who carried out the work under my supervision. Certified further that, to the best of my knowledge, the work reported herein does not form part of any other thesis or dissertation on the basis of which a degree or award was conferred on an earlier occasion on this or any other candidate.

Submitted to the CD23721 - Film Making and Radio Podcasting Examination held on

Signature of Internal Examiner

Signature of External Examiner

Acknowledgement

I express my sincere thanks to the management and faculty of Rajalakshmi Engineering College for supporting this filmmaking project and providing an opportunity to study the creative and technical stages of short-film production.

I am grateful to the Department of Computer Science and Design and to my project supervisor, [Supervisor name], for guidance in developing the project. The report brings together the narrative, performance, visual planning, editing, and sound requirements of The Chaos.

I thank the cast, crew, friends, and family members who supported the project. Their cooperation was valuable in shaping a short film that uses everyday environments, digital devices, performance, visual contrast, and editing to communicate an emotional idea.

Appendix A Scene and Shot Breakdown	12

Chapter 1 covers the film, its background, and its theme. Chapter 2 examines the story progression, characters, recurring objects, visual symbolism, and emotional progression. Chapters 3 to 5 develop the production approach, and Chapter 6 brings together the final outcome, practical challenges, and learning objectives.

Chapter 1 Introduction

1.1 About the Film

The Chaos is a short film about an individual's changing emotional state, represented through everyday routines, digital devices, interpersonal interaction, and contrasting visual treatments. The film uses domestic interiors and an outdoor setting to move between personal isolation, interaction, visual disturbance, and reflection.

The film begins with the protagonist in a bedroom using a mobile phone. The camera then observes objects and activities within the room, including a portable speaker and computer. As the story progresses, another character enters the narrative through conversation. A later section changes to black-and-white imagery, visually separating the more disturbed portion of the film from the surrounding colour sequences. The film closes with an outdoor conversation and the statement “Some memories doesn't fades away,” followed by the filmmaker credit.

1.2 Background

The project explores how a short film can communicate an emotional condition through framing, props, locations, performance, colour, sound, and editing rather than depending entirely on direct explanation. The repeated presence of the phone and computer establishes the protagonist's routine and creates a visual connection between the character and technology.

The filmmaking objectives are to establish the protagonist's environment through simple visual details, develop the story through a sequence of interactions, create a noticeable change in mood through colour treatment, and conclude with a short reflective statement. The movement from enclosed indoor spaces to an outdoor conversation provides a visual progression across the film.

1.3 Theme and Message

The central themes of The Chaos are emotional disturbance, memory, isolation, communication, and human interaction. The film places the protagonist in familiar surroundings and gradually changes the visual atmosphere to represent an internal shift.

The final statement, “Some memories doesn't fades away,” emphasizes the lasting nature of memory. The ending does not provide an extended explanation; instead, it allows the final conversation and text to leave the audience with a reflective interpretation.

Chapter 2 Story and Characters

2.1 Story Synopsis

The protagonist is first shown lying on a bed and using his mobile phone. The opening establishes a quiet personal environment and immediately places digital communication at the centre of the character's attention. The film then cuts to a portable speaker and other details of the room before returning to the protagonist.

The protagonist continues interacting with his phone and later moves to a computer/work area. These scenes establish a routine dominated by devices and indoor activity. The film then introduces another person and shifts into a direct conversation, changing the rhythm from solitary activity to interpersonal interaction.

The story subsequently moves through another indoor section and into a visually contrasting black-and-white sequence. The protagonist's movements and expressions in this portion suggest confusion, pressure, or emotional disturbance. The monochrome treatment strengthens the sense that the character is experiencing a different emotional phase.

The film finally moves to an outdoor table where the protagonist speaks with the supporting character. The more open setting contrasts with the earlier enclosed spaces. The film ends with the statement “Some memories doesn't fades away” and the credit “A film by PAWAN KUMAR S.”

2.2 Main Characters

The Protagonist is the emotional centre of the film. His actions, phone usage, movement through different locations, facial expressions, and interaction with the supporting character carry the narrative.

The Supporting Character provides the main interpersonal connection in the later portion of the film. The character participates in the indoor and outdoor conversation scenes and helps shift the narrative from solitary activity toward direct human interaction.

2.3 Character Development

The protagonist moves from a quiet, device-focused routine toward a more visibly disturbed and reflective state. The progression is communicated mainly through action and visual treatment rather than through explicit exposition.

The supporting character becomes important when the film changes from individual activity to conversation. The final outdoor interaction provides a calmer visual setting and allows the film to end on a reflective note.

2.4 Message

The film presents memory as something that can remain emotionally significant after an experience has passed. It also contrasts screen-based activity with direct human interaction, allowing the audience to consider how personal experiences can remain within a person even when the surrounding situation changes.

2.5 Use of Visual Objects

The mobile phone is a recurring object and represents communication, attention, and the protagonist's connection to digital activity. The portable speaker and computer reinforce the technology-oriented environment. These objects are introduced before the more interpersonal scenes, giving the opening a recognizable everyday context.

2.6 Colour and Visual Contrast

The film uses colour changes as a storytelling device. The early and later sections use colour imagery, while a central portion shifts to black and white. This contrast separates the emotionally heightened section and gives the audience a visual indication of a change in the protagonist's state.

2.7 Emotional Progression

The emotional movement can be summarized as: personal routine; increasing device-focused activity; interpersonal interaction; heightened confusion represented through monochrome imagery; and reflective conversation. The final text connects this progression with the idea of memories that remain.

Chapter 3 Pre Production

3.1 Script Development

The film was developed around a simple visual narrative in which the protagonist's emotional condition is communicated through actions, locations, conversations, and editing. The title The Chaos establishes the broad emotional idea, while the closing statement gives the film a reflective conclusion.

The script and shot planning require attention to the repeated phone interactions, the computer sequence, the transition into the monochrome section, and the final outdoor conversation. The intended emotional changes should be preserved during rehearsal and shooting.

3.2 Scene Planning

The film can be divided into six major narrative sections: the opening bedroom sequence; the speaker and warm-toned room sequence; the phone-focused activity; the computer and indoor conversation sequence; the black-and-white chaos sequence; and the final outdoor conversation followed by the closing text.

3.3 Locations

The visible locations include a bedroom, an indoor computer/work area, a kitchen or common interior space, a doorway or hallway, and an outdoor table setting. The enclosed indoor locations establish the protagonist's personal environment, while the outdoor location provides contrast for the final interaction.

3.4 Cast and Crew

Role	Name / Details
Principal performer	PawanKumar
Supporting performer	Akash
Director / Filmmaker	Pawan Kumar S
Writer	Pawan Kumar and Saswath Vishal
Camera	Saswath Vishal, Akash and Pawan Kumar
Sound	Akash
Editor	Pawan Kumar S, Saswath Vishal

3.5 Production Planning

The production required continuity of costume, props, phone and computer positions, performer movement, and location arrangement. The colour-treated sequence and the black-and-white section required particular attention during shooting so that the intended visual differences could be reproduced consistently during editing.

3.6 Key Props and Visual Elements

Element	Purpose
Mobile phone	Recurring communication and attention element
Portable speaker	Establishes the personal room environment
Computer / monitor	Represents the protagonist's digital routine
Bedroom and indoor furniture	Provides the main enclosed setting
Outdoor table	Provides the final conversational setting
Black-and-white treatment	Marks the heightened emotional section
Closing text	Communicates the reflective message

Chapter 4 Production

4.1 Shooting Process

The shooting process follows the film's movement from individual activity to interpersonal interaction. The opening records the protagonist on the bed and then uses detail shots of the speaker, phone, and surrounding environment. The indoor interaction is recorded using wider and medium compositions that establish both participants. The later doorway and black-and-white section uses a different visual treatment to emphasize the protagonist's emotional disturbance. The final outdoor scene returns to colour and places the two characters at a table for the concluding interaction.

4.2 Camera

The film uses a mixture of wide, medium, close-up, and detail shots. The opening uses a high/top-oriented composition on the bed, while detail shots are used for the phone, speaker, and computer. Medium and wider shots are used when the supporting character enters the scene. The submitted video is presented in a 16:9 frame at approximately 1280×720 pixels and 30 frames per second. These values are based on the submitted video file.

4.3 Lighting

The film uses available indoor lighting together with a noticeable warm/red lighting treatment in selected interior scenes. The lighting variation helps separate the visual phases of the film. The later black-and-white section relies on contrast rather than colour to create its atmosphere.

4.4 Audio

Audio supports both the everyday indoor activity and the conversation scenes. Dialogue becomes more important when the supporting character is introduced. Environmental and device-related sounds contribute to the realism of the domestic settings. The exact recording equipment is not identifiable from the submitted video and should be entered from the production record.

4.5 Direction

The direction uses controlled movement, repeated device interactions, pauses, and changes in visual treatment to communicate the protagonist's state. The supporting character is introduced after the opening establishes the protagonist's isolated routine. The later outdoor scene provides a more open visual space for the final interaction.

Chapter 5 Post Production

5.1 Video Editing

The editing is structured around changes in activity and mood. Detail shots of the phone, speaker, and computer are intercut with character shots to establish the protagonist's routine. The transition from indoor conversation to the monochrome sequence creates a noticeable shift in rhythm and visual tone.

The edit also includes the title “THE CHAOS” and a closing text card. The final sequence is allowed to settle into the outdoor conversation before the reflective statement appears, giving the ending a clear separation from the preceding action.

5.2 Sound and Music

Sound is used to maintain continuity between the visual sections and support the conversation. Dialogue should remain intelligible and should be balanced against environmental sound and any background music. The final master should retain the natural atmosphere of the outdoor scene while keeping the closing message clear.

5.3 Colour Correction

The colour treatment is an important part of the film. The warm/red interior sequence creates a stronger visual identity, while the black-and-white section clearly separates the emotionally heightened portion from the surrounding colour footage. During final correction, exposure and white balance should be matched within each sequence while preserving the intentional differences between sections.

5.4 Titles and Final Presentation

The film uses the title “THE CHAOS” as a visual identifier and concludes with the statement “Some memories doesn't fades away.” The final credit reads “A film by PAWAN KUMAR S.” The simple text presentation allows the final message to remain the focus of the ending.

5.5 Production Record

Parameter	Recorded / To be entered
Film title	THE CHAOS
Final running time	Approximately 4 minutes

Frame size	1280 × 720 pixels
Frame rate	30 fps
Aspect ratio	16:9
Camera / smartphone	Smartphone
Editing software	Adobe premier pro
Music / sound credits	Stock

Chapter 6 Conclusion

6.1 Final Outcome

The Chaos is an intimate short film that represents an individual's changing emotional state through ordinary spaces, digital devices, conversations, and visual contrast. The film moves from a personal indoor routine to interpersonal interaction, then through a monochrome section before arriving at a reflective outdoor conversation.

6.2 Production Challenges

The main production challenges include maintaining continuity across several indoor locations, controlling exposure between different lighting conditions, recording clear dialogue, and maintaining consistent framing for phone and computer inserts. The transition between colour, warm/red treatment, and black-and-white footage also requires careful attention during editing.

The film depends on the protagonist's body language and visual atmosphere, so performance timing is important. Continuity of costume, device position, seating, and background elements is also necessary when shooting repeated actions from different angles.

6.3 Learning Outcomes

The project provides practical experience in screenplay interpretation, scene breakdown, camera composition, performance direction, location planning, sound recording, editing, colour treatment, and title design. It demonstrates how recurring objects and changes in visual style can communicate information without lengthy exposition.

The project also provides an understanding of how pre-production decisions affect the final edit. Planning the locations, device shots, conversations, and visual transitions makes it easier to maintain continuity and create a coherent emotional progression.

6.4 Overall Conclusion

The strength of The Chaos lies in its use of simple everyday surroundings to communicate a more complex emotional experience. The repeated phone and computer imagery establishes the protagonist's routine, while the supporting character introduces direct human interaction. The visual change into black and white gives the film a distinct emotional section.

The closing statement about memories gives the film a reflective ending. Through controlled visual planning, performance, editing, and colour treatment, the project demonstrates the practical application of filmmaking concepts in a short-form narrative.

Appendix A Scene and Shot Breakdown

Scene	Setting and action	Suggested / observed coverage
1	Bedroom. Protagonist lies on the bed and uses the mobile phone.	High/top opening shot; medium character shot; phone detail.
2	Indoor room with speaker and warm/red visual treatment.	Speaker detail; room establishing shot; medium character coverage.
3	Bedroom/desk. Protagonist interacts with the phone and types.	Close-up phone shots; over-the-shoulder view; reaction shots.
4	Computer/work area followed by indoor interaction with another person.	Medium desk shot; movement coverage; two-person composition.
5	Doorway/interior section presented in black and white.	Medium/wide shots; body-language close-ups; movement coverage.
6	Outdoor table. Protagonist has a conversation with the supporting character.	Two-shot; medium close-ups; reaction shots; final conversation coverage.
7	Closing title and message.	THE CHAOS title; memory statement; filmmaker credit.

A1 Key Props and Continuity

The main visible props and elements include the mobile phone, portable speaker, computer/monitor, household furniture, and objects present at the outdoor table. Track the position of the phone and computer, performer seating, costume, and table objects between repeated takes.

A2 Supporting Material

Production stills, behind-the-scenes photographs, storyboard pages, editing screenshots, the film poster, and the final credit list can be added here when available.
